Pay attention

- This manual is not project specific.
- This manual is not legally binding.
- No rights may be derived from this installation manual.
- See **datasheet ValkCableCare** for cable management.
- The system is placed in the middle zone of the roof.

Installation manual ValkQuattro

Disclaimer

This installation manual composed with the greatest possible care and contains specific information for correct and safe installation of the solar mounting system, including installation drawings and ballast tables, calculated according to the Eurocode regulations. The standard values used for input of these calculations, always need to be checked in advance by the installer for correctness. In case values are different, a project case specific calculation needs to be made. Please contact Van der Valk Solar Systems in this situation.

At all times all currently applicable structural, safety and building regulations must be observed prior to installation of the solar mounting system. The building in question will be subject to a load as a result of the solar mounting system installed/mounted. Solar mounting systems installed on roofs will be exposed to wind and snow loads. Therefore, you are at all times responsible to obtain and use a design calculation to establish whether or not the building will be able to withstand the (extra) load at all times. Where necessary, modifications need to be made by you. Van der Valk will not accept any form of liability upon you not having obtained and used such a required design calculation.

Mounting systems for PV-panels placed on flat roofs should either be mechanically attached to the roof or need to be supported by ballast, to make sure that the solar mounting system is unable to be lifted, tipped over or slide. The required ballast weight per system shown in the tables in this manual ensures that the mounting system can be installed and used safely. In case the inclination of the roofs is 5 degrees or more, the PV-mounting system must always be mechanically fixed to the construction of the roof.

The calculations do not take into account obstacles in the near surrounding such as, for example, high buildings, cliffs and mountains. Restrictions also apply for the position of the solar mounting system on a roof. The solar panels must be installed at a certain distance from the edge of the roof: the middle zone.

The standard warranty is 10 years, which can be extended under certain conditions. The guarantee provided is subject to the guarantee conditions stated in the general terms and conditions stipulated by Van der Valk Solar Systems B.V.. Our terms and conditions shall apply to all our products at all times and can be found on our website:

www.valksolarsystems.com

Van der Valk Solar Systems B.V. does not accept any liability for any direct and/or indirect consequences of any act (or omission) ensuing from the information in or failure to observe the instructions provided in this installation manual. The use of the installation manual will at all times be subject to Dutch law.

Van der Valk Solar Systems holds the right to amend this document without further notice.

The ValkQuattro mounting system is a product of:

Van der Valk Solar Systems BV

Netherlands Chamber of Commerce: 27355116

Required ballast | The Netherlands

General

The ValkQuattro® mounting system must be reinforced by means of tiles, which must be placed on the indicated ballast foundations. In **three steps** you can easily calculate the required ballast;

- determine the wind area on the windmap
- choose the wind area and building height in the table
- you can now read the number of tiles / kg

Note 1: The extra ballast must be equally divided over the ballast foundations.

Note 2: The max. of 32 tiles can be placed for extra ballast (288 kg).

Environmental factors

Position	Middle zone roof
Terrain category	Built environment
Roof materials	Bitumen

Panel: maximum dimensions 1800x1100 mm (21 kg)

Building height	0 - 5 meter	5 - 7 meter	7 - 9 meter	9 - 12 meter	12 - 15 meter	
I (29,5 m/s)	282,0	282,0	X	X	X	kg
	31,5	31,5	X	X	X	tiles
II (27 m/s)	188,0	188,0	244,0	X	X	kg
	21,0	21,0	27,5	X	X	tiles
III (24,5 m/s)	102,0	102,0	148,0	203,0	248,0	kg
	11,5	11,5	16,5	23,0	28,0	tiles

X = the required ballast is higher than will fit under the system. The system must be mechanically attached to the roof. Please contact Van der Valk Solar Systems.

* If you use tiles of different sizes and thus another weight, you need to adjust the number of tiles to get the right weight.

Required ballast | Sweden

General

The ValkQuattro® mounting system must be reinforced by means of tiles, which must be placed on the indicated ballast foundations. In **three steps** you can easily calculate the required ballast;

- determine the wind area on the windmap
- choose the wind area and building height in the table
- you can now read the number of tiles / kg

Note 1: The extra ballast must be equally divided over the ballast foundations.

Note 2: The max. of 32 tiles can be placed for extra ballast (288 kg).

Environmental factors

Position	Middle zone roof
Terrain category	III (villages, suburban terrain, permanent forest)
Height above sea level	175 m
Roofing materials	Bitumen

Windmap Sweden

Panel: maximum dimensions 1800x1100 mm (21 kg)

Building height	0 - 5 meter	5 - 7 meter	7 - 9 meter	9 - 12 meter	12 - 15 meter

	11,0	17,5	23,0	29,0	X	tiles

X = the required ballast is higher than will fit under the system. The system must be mechanically attached to the roof. Please contact Van der Valk Solar Systems.

* If you use tiles of different sizes and thus another weight, you need to adjust the number of tiles to get the right weight.

Required ballast | Finland

General

The ValkQuattro® mounting system must be reinforced by means of tiles, which must be placed on the indicated ballast foundations. In **three steps** you can easily calculate the required ballast;

- determine the wind area on the windmap
- choose the wind area and building height in the table
- you can now read the number of tiles / kg

Note 1: The extra ballast must be equally divided over the ballast foundations.

Note 2: The max. of 32 tiles can be placed for extra ballast (288 kg).

Environmental factors

Position	Middle zone roof
Terrain category	III (villages, suburban terrain, permanent forest)
Roofing materials	Bitumen

Windmap Finland

- Mainland across the country = 21 m/s
- Sea areas:
Open sea, scattered islands on open sea = 22 m/s
- In Lapland: at the **top** of the mountains = 26 m/s
- In Lapland: at the **foot** of the mountains = 21 m/s

Installation: Page 06

Ballast tile (7506303045)
Installation: Page 06
Not included in kit

End clamp (721552)
Installation: Page 07

Panel clamp (721550)
Installation: Page 08

Cable clamp (732001)
Installation: Page 09

ValkHint!

1) Place the mass blocks on the right locations before mounting the roof carriers.

Detail A

Mount the connector pieces to the roof carriers. Make sure they are placed as shown in the drawing.

Detail A

VAN DER VALK

The groove on the bolt corresponds with the orientation of the bolt head!

Detail A

Mount the push rod to the roof carriers to connect the two rows.

VAN DER VALK

Detail B

The groove on the bolt corresponds with the orientation of the bolt head!

Detail A.1

ValkHint!

Create the aluminium profile with the connector pieces/couplings first. Then mount the profile to the roof carrier.

A

Detail A.2

VAN DER VALK

SOLAR SYSTEMS

Front view

Make sure the diagonal push rods are mounted in opposite directions (crossed)

A

Detail A

Mount the push rods between the aluminium profile and the roof carrier.

Detail A

For the required number of tiles check the ballast tables in the front of this manual.

Step 1

Take the end clamp out of its slot for an easier assembly.

Step 2

Step 3

The end clamp can only be turned clockwise, so make sure the end clamp is placed the right way.

Step 4

Put the end clamp in the right slot to continue the assembly.

Step 5

Detail A

Attention!! Do not forget to install the end clamps above the fourth panel! (same assembly as other end clamps, page 07.)

Mount cable clamp on the panel.
